Question: 91

What are Private Keys used for?

- A. To Protect the Public Keys by being cryptographically significant.**
- B. To Sign Transactions And To Derive an Address From.**
- C. To Generate An Address which can sign transactions.**

Answer: B

Question: 92

Public Keys vs. Private Keys. Which statement is true?

- A. The Public Key is for Signing Transactions, the Private Key must be given out to verify the signature.**
- B. The Private Key signs transactions, the Public Key can verify the signature.**
- C. The Private Key is to generate a Public Key. The Public Key can sign transactions, the address is here to verify the transactions.**

Answer: B

Question: 93

A Hashing Algorithm is deterministic. What does it mean?

- A. it always produces the same output given the same input.**
- B. it uses equally distributed data to produce the output given a long input.**
- C. it shouldn't be possible to re-generate the input given the output.**

Answer: A

Question: 94

DApps are:

- A. great, because they cut the middle man, run on a trusted platform, apply logic to the blockchain where already economic assets are running and thus allow peer to peer trade.**
- B. an amazing way to create new applications. Those applications run entirely separated from other applications on the platform and allow for logical interactions. They can't access any funds to add an additional layer of trust.**
- C. a new way of applying logical operations for banks and big financial institutions. This way they can reduce the staff while operating at increased security.**

Answer: B

Question: 95

To get most out of the blockchain, it is best:

- A. to use it for the whole business logic. It's always best to have everything in once place.**
- B. to use it only for things which need the benefits of the blockchain.**

Answer: B

Question: 96

Which statement is true about the EVM?

- A. While the EVM is Sandboxed, it isn't as powerful as the Bitcoin Network, because it's not Turing Complete.**
- B. The EVM can't access hardware layers or anything outside a blockchain node because it's sandboxed.**
- C. The EVM is extremely powerful, turing complete and perfect for doing computational intensive things, because of the direct access to the graphics card.**

Answer: C

Question: 97

Which is the right order for Denominations?

- A. Wei, Finney, Szabo, Ether, Tether.**
- B. Finney, Szabo, Mether, Gwei.**
- C. Gwei, Szabo, Finney, Ether.**

Answer: C

Question: 98

The nonce-field in a transaction is used:

- A. to protect against replay attacks.**
- B. to have an additional checksum for transactions.**
- C. to sum up all ethers sent from that address.**

Answer: A

Question: 99

Solidity gets compiled:

- A. to bytecode that can't be understood by humans.**
- B. to bytecodes which are essentially opcodes running instruction by instruction.**

Answer: B

Question: 100

Having a bug-bounty program early on:

- A. can help to engage the community in testing your smart contracts and therefore help to find bugs early.**
- B. might be a burden as it is an administrative overhead mainly.**
- C. is completely useless. Who wants to test beta-ware software? It's better to start with the bug-bounty program after the contract is released on the main-net.**

Answer: A

Question: 101

Consensus is reached:

- A. by the miner nodes which make sure that a transaction is valid.**
- B. by every single node in the blockchain network executing the same transaction.**
- C. by a cryptographic secure signature algorithm called ECDSA which makes sure that cheating is impossible.**

Answer: B

Question: 102

Smart Contracts can be written in:

- A. Java, C++, Solidity and JavaScript, because the Ethereum Blockchain is completely language agnostic and cross compilers exist for every major language.**
- B. Solidity, Viper, LLL and Serpent, because those are high level languages that are compiled down to bytecode.**
- C. Solidity and JavaScript, because those are the official first implementations for Distributed applications and the Blockchain supports those languages fully.**

Answer: B

Killexams.com is a leading online platform specializing in high-quality certification exam preparation. Offering a robust suite of tools, including MCQs, practice tests, and advanced test engines, Killexams.com empowers candidates to excel in their certification exams. Discover the key features that make Killexams.com the go-to choice for exam success.

Exam Questions:

Killexams.com provides exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these questions, candidates can familiarize themselves with the content and format of the real exam.

Exam MCQs:

Killexams.com offers exam MCQs in PDF format. These questions contain a comprehensive collection of questions and answers that cover the exam topics. By using these MCQs, candidate can enhance their knowledge and improve their chances of success in the certification exam.

Practice Test:

Killexams.com provides practice test through their desktop test engine and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice test cover a wide range of questions and enable candidates to identify their strengths and weaknesses.

Guaranteed Success:

Killexams.com offers a success guarantee with the exam MCQs. Killexams claim that by using this materials, candidates will pass their exams on the first attempt or they will get refund for the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exam.

Updated Contents:

Killexams.com regularly updates its question bank of MCQs to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.
